

Limited Visual Dam Safety Inspection Summary Report

MA-069

Reservoir 15

Maui, Hawaii

Prepared by:

U.S. ARMY CORPS OF ENGINEERS HONOLULU ENGINEER DISTRICT

STATE OF HAWAII
DEPARTMENT OF LAND AND NATURAL RESOURCES

May 2006

Dam ID:	MA-069	
Name: F	Reservoir 15	

I. Purpose

Due to disaster occurrences of periodic heavy rains and flooding, which has caused extensive damage to property and loss of lives, the Governor has issued a State of Emergency Proclamation extending from February 20, 2006 to April 9, 2006. In light of the tragic failure of the Kaloko dam on Kauai and the continued forecast of heavy rains, emergency inspections of all regulated dams in all counties are being undertaken.

These inspections are for the purpose of determining if any of the regulated dams and reservoirs in the City and County of Honolulu, Maui County or Hawaii County, are suspect for immediate concern to the downstream area under the prolonged conditions of heavy rain showers.

II. Authority

Inspections are authorized under the Hawaii Dam Safety Act of 1987, Chapter 179D "Dams and Reservoirs" of Hawaii Revised Statues, and Title 13, Subtitle 7, Chapter 190, "Dams and Reservoirs" of the Hawaii Administrative Rules.

These inspections are being conducted under joint agreements of the U.S. Army Corps of Engineers (USACE), the U.S. Department of Agriculture Natural Resources Conservation Service (NRCS), and the State of Hawaii. The Memorandum of Agreement with the U.S. Army Corps of Engineers is entered into pursuant to 10 U.S.C. § 3036(d)(2), and the Intergovernmental Cooperation Act (31 U.S.C. §6505), and established via support agreement number DL-06-01.

III. Scope

Visual inspection will be made on parts of the embankment and appurtenant works readily available and visible for inspection by the inspection team at the time of the inspection. Such parts and appurtenant works would include the upstream slope, crest, downstream slope, abutments and toes, outlet works, and spillway.

On the date of this limited visual inspection, there may appear to be no immediate threat to the safety of the dam, however no assurance can be made regarding the dam's condition after this date. Subsequent adverse weather and other factors may affect the dam's condition.

Dam ID:	MA-069	
Name: F	Reservoir 15	

IV. Limitations of Findings and Recommendations

The inspection is based only on visible features/areas of the dam on the day of inspection. The inspection does not entail detailed stability, hydrologic, hydraulic, or seismic investigations. This inspection is not a formal phase I or phase II dam safety inspection and does not include a review or evaluation from each specialist of an inspection team, such as a geologists, civil, geotechnical, structural, or hydraulics engineer. The owner should verify the findings of this report and take corrective actions. The owner may submit to the State alternative corrective actions that are certified by a licensed professional engineer in the State of Hawaii experienced in the design and construction of dams. This inspection does not relieve the owner/operator from their responsibility to conduct routine inspections, maintenance, repairs, modifications, monitoring, documentation, and/or investigative studies.

V. Inspection Team

Organization Name / Title

U.S. Army Corps of Engineers Jon Kolber

Geotechnical Engineer

State of Hawaii, Dept. of Land and Natural Resources Denise Manuel

Edwin Matsuda

VIII. Dam Type

The dam appeared to be an earthen embankment dam.

Dam ID: _	MA-069	
Name: R	eservoir 15_	

IX. Dam Classification

The current hazard classification of this dam is: Undetermined

The classification should be determined.

Hazard Potential Classification based on the following:

Category	Loss of Life	Economic Loss
Low	None Expected	Minimal (undeveloped to
		occasional structures
		or agriculture)
Significant	Few (No Urban development and	Appreciable (Notable
	no more than a small	agriculture, industry or
	number of inhabitable	structures)
	structures)	
High	More than a few	Extensive community, industry
_		or agriculture.

Based on inventoried storage and height data, the size classification of the dam is: Most likely Small.

Size Classification based on the following:

Category	Storage (Acre-Feet)	Height (feet)		
Small	< 1000	< 40		
Intermediate	> 1000 and < 50,000	> 40 and < 100		
Large	> 50,000	> 100		

X. Summary of Inspection

Condition Rating Criteria: The conditional terms in this report are used to generally describe the conditions below. Inspections, monitoring, and additional investigations are considered to be incidental to all condition ratings.

Satisfactory	Expected to fulfill intended function.
Fair	Expected to fulfill intended function, but maintenance is recommended.
Poor	May not fulfill intended function; maintenance or repairs are necessary.
Unsatisfactory	Is not expected to fulfill intended function; repair, replacement, or modification is necessary.
Unknown	Not visible, not accessible, not inspected, or unable to determine the condition rating based on the observation taken.

Dam ID:	MA-069	
Name: R	eservoir 15_	

A. General appearance:

This reservoir was completed in 1917 and continues to operate as an irrigation control structure. The dam is 40 feet high and 200 feet long. The reservoir appears to have a significant drainage area.

Findings and Corrective Actions:

- a. The Owner shall maintain documentations including Construction plans, specifications, improvements, modifications, Operations and Maintenance Manuals and routine inspection logs for this dam facility.
- b. An EAP is required for High Hazard Dams. Submit an updated EAP for this facility.
- c. Routine inspection logs were not inspected.
- d. Access to site appears to be satisfactory.
- Submit current Operations and Maintenance Manual or Procedures for this dam / reservoir facility.
- f. Submit Site or Facility Map of this Dam which identifies the location of major features including outlet works controls and conduits.
- g. Emergency Alarms / Monitors: There were no alarms or monitors observed on this reservoir.
- h. Power / Communication: There were no communication systems observed on this reservoir.

B. Access / Security:

Access to the dam was accomplished via a County roadway. A four wheel drive vehicle is not required.

Security issues. Access to the dam is unrestricted.

C. Intake Works:

Water flows into the reservoir through an intake ditch.

Findings and Corrective Actions:

- a. The intake works were not inspected.
- b. The intake works were not tested.
- c. The owner verbally described the intake ditch during this inspection.

D. Reservoir:

The reservoir was 25 feet per gage at the time of inspection. The normal operating level is 7 to 29 feet per gage. A staff gage was observed in the middle of the reservoir.

Findings and Corrective Actions:

a. The reservoir appeared to be in satisfactory condition, no corrective actions are required at this time.

Dam ID:	MA-069	
Name: Reservoir 15		

E. Upstream Slope: (Fair)

The upstream slope is grouted rip rap on a 3 on 1 slope. There are large trees and other tall vegetation growing beyond the center part of the upstream slope.

Findings and Corrective Actions:

- a. The upstream slope appeared to be in fair to poor condition and requires corrective action.
- b. Slope protection needs maintenance. Description: Need to remove trees and other vegetation from the upstream slope.
- c. The upstream slope was not visible due to high grass and bush vegetation. Clear high vegetation and maintain low to enable easy visual inspection.
- d. Trees were observed on the dam embankment. Trees have been identified as the probable cause of piping failures and can possibly cause severe damage to the embankment if they are uprooted during high winds. Corrective action is required to remove tree hazards from the dam. Acceptable remedies include removal of the tree and its root structure down to a 2-inch diameter and reconstructing the damaged embankment section. All repair work shall be accomplished as per the requirements of licensed geotechnical or structural engineers. Routinely monitor the damaged area for signs of settlement and seepage.

F. Crest: (Satisfactory)

The dam crest was approximately 25 feet wide. It also serves as a county road.

Findings and Corrective Actions:

- a. The dam crest appeared to be in satisfactory condition, no corrective actions are required at this time.
- b. Access along the crest was satisfactory.

G. Downstream Slope: (Fair)

The downstream slope was approximately 2 on 1. Trees and tall grass were growing on the downstream slope, obscuring it from visual inspection.

Findings and Corrective Actions:

- a. The downstream slope appeared to be in fair to poor condition and requires corrective action.
- b. Slope protection needs maintenance. Need to remove trees and other vegetation from the downstream slope.
- c. The downstream slope was not visible due to high grass and bush vegetation. Clear high vegetation and maintain low to enable easy inspection.
- d. Trees were observed on the downstream slope. Trees have been identified as the probable cause of piping failures and can possibly cause severe damage to the embankment if they are uprooted during high winds. Corrective action is required to remove tree hazards from the dam. Acceptable remedies include removal of the tree and its root structure down to a 2-inch diameter and reconstructing the damaged embankment section. All repair work shall be accomplished as per the requirements of a licensed geotechnical or structural

Dam ID: _	MA-069	
Name: R	eservoir 15_	

engineer. Routinely monitor the damaged area for signs of settlement and seepage.

H. Abutments / Toe: (Fair)

The abutments were obscured by trees and other tall vegetation.

Findings and Corrective Actions:

- a. The abutments/toe appeared to be in fair to poor condition and requires corrective action.
- b. The slope protection needs maintenance by removing trees and other tall growth from the abutments.
- c. The abutment area was not visible due to tall vegetation. Clear high vegetation to enable easy visual inspection.
- d. Trees were observed along the abutments. Trees have been identified as the probable cause of piping failures and can possibly cause severe damage to the embankment if they are uprooted during high winds. Corrective action is required to remove the tree hazards from the dam. Acceptable remedies include removal of the tree and its root structure down to a 2-inch diameter and reconstructing the damaged embankment section. All repair work shall be accomplished as per the requirements of a licensed geotechnical or structural engineer. Routinely monitor the damaged area for signs of settlement and seepage.

I. Outlet Works: (Satisfactory)

The outlet works consist of a 12-inch diameter DIP pipe controlled on the downstream side of the dam by a valve.

Findings and Corrective Actions:

- a. The outlet works were not tested.
- b. The outlet works appear to be in satisfactory condition. No corrective actions are required at this time.

J. Spillway: (Satisfactory)

This spillway consisted of a concrete lined U-shape channel approximately 2 feet wide by 1 foot high. The spillway approach was clear. There was no erosion observed near the spillway.

Findings and Corrective Actions:

a. The Spillway appeared to be in satisfactory condition, no corrective actions are required at this time.

Dam ID:	MA-069	
Name: R	eservoir 15_	

K. Down Stream Channel: (Unknown)

There is an undefined downstream channel, which carries flow to an irrigation ditch downstream of the dam.

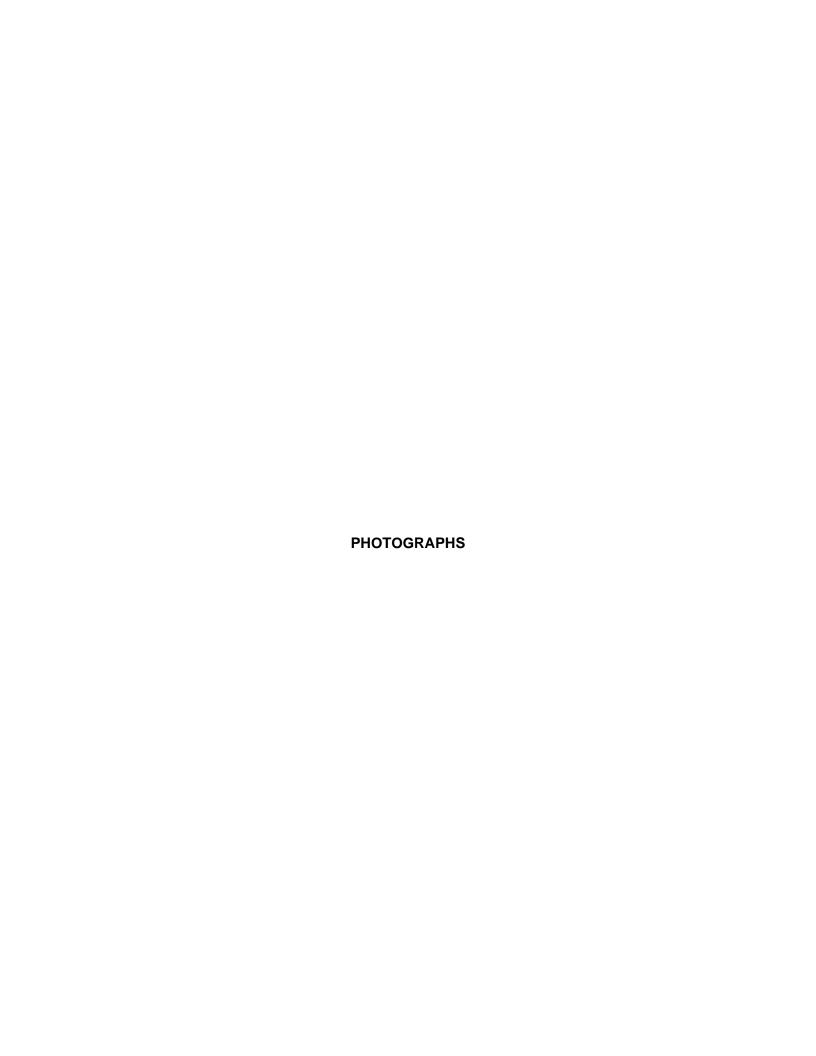

Findings and Corrective Actions:

a. The downstream channel was not inspected.

XI. Additional Comments:

No immediate dam safety threat at this time.

Reservoir is ditch fed, controlled by a wooden gate. Outlet works feed irrigation ditch and/or drip irrigation system. Downstream spillway concrete channel connects to irrigation ditch.

069 Crest - Note this is also a county highway.

069 Down slope - Note the downstream slope is completely obscured and overgrown by trees and tall vegetation.

069 Out valve - View of the outlet pipe and control valve

Limitations and Intent of this Dam Safety Inspection:

This Dam Safety Inspection was conducted to assess the general overall condition of the reservoir/dam, identify visible deficiencies, and recommend areas of for monitoring, additional investigative studies and corrective actions. The inspection is based only on visible features/areas of the dam on the day of inspection. This inspection is not a formal phase I or phase II dam safety inspection and does not include a review or evaluation from each specialist of an inspection team, such as a geologists, civil, geotechnical, structural, or hydraulics engineer. The owner should verify the findings of this report and take corrective actions. The owner may submit to the State alternative corrective actions that are certified by a licensed professional engineer in the State of Hawaii experienced in the design and construction of dams. This inspection does not relieve the owner/operator from their responsibility to conduct routine inspections, maintenance, repairs, modifications, monitoring, documentation, and/or investigative studies. The inspection was conducted under the authority of the Hawaii Revised Statures Chapter 179D, and Hawaii Administrative Rules, Title 13, Chapter 190, titled "Dams and Reservoirs". Questions regarding this inspection should be forwarded to the Hawaii State Dam Safety Program; PO Box 373; Honolulu, Hawaii 96809; Ph. (808) 587-0236.

Revised: Dec. 1, 2003
